Outside Corner

Bottom Panel

Screw Caps

Color-Match Screw

3. On each panel, with the metal lines horizontal locate the HEM edge without pre-piloted screw holes.
   This will be the top.

HEM edge

4. Using (1) end panel align the top piloted holes with (1) outside corner. Using a ¼" hex bit, screw in until snug

5. Align bottom piloted holes, using ¼" hex bit, screw in until snug

6. Align center piloted holes, using ¼" hex bit, screw in until snug

7. Repeat steps 4, 5 & 6 until each end panel (2 total) has (2) outside corners screwed on to each

8. Locate (1) side panel, align the top piloted holes, with (1) corner (corner should be connected to end panel as seen to the right), using a ¼" hex bit, screw in until snug

End Panel with 2 Corners

9. Align bottom piloted hole, using ¼" hex bit screw in until snug

10. Align center piloted hole, using ¼" hex bit screw in until snug

11. Repeat steps 8, 9 & 10 until each side panel (2 total) is screwed together with the outside corners

12. Now to install the bottom to your box. It is easiest to flip the box over so the legs are facing up.

Bottom Panel in Planter Box

13. Locate the bottom panel and (8) screws. With the 90° (degree) angle facing up, place the bottom into the box. (Flat side of bottom should be on the inside of the planter box)

14. Align the pre-piloted holes to one another. Using your ¼" hex bit screw both end panels to the base until snug.

15. Align the pre-piloted holes on the side panels to the bottom. Using your ¼" hex bit screw both side panels to the base until snug.

16. Your raised planter box is now ready to fill and plant!
